Patient ID	GE11120019	Sex	Female
Name	FONOROW MARIANNE E	Weight	150 lb / 68 kg
Exam Date	Dec 9, 2013	Height	5 ft 4 in / 163cm
Birth Date	Oct 17, 1952	Diabetes	No
Age	61	Smoking	No

Cardiac History CAL SCORE

Important Information About Your Scan

The following information is based on an analysis of the coronary arteries only. Calcium deposits do not correspond directly to the percentage of narrowing of the arteries. They do correlate directly to the amount of coronary plaque, and to the risk of future coronary disease. These calcium deposits usually begin to form years before any symptoms develop. Early detection and modification of risk factors, such as smoking and cholesterol intake, can slow the progress of coronary artery disease.

A low score suggests a low likelihood of coronary artery disease, but does not exclude the possibility of significant coronary artery narrowing. The results should be discussed with your physician taking into account other risk factors such as age, gender, family history, diabetes, smoking or high cholesterol levels.

Should you ever experience chest pain, difficulty in breathing, discomfort radiating into your neck or arm, or discomfort combined with lightheadedness, sweating, fainting or nausea, you should seek prompt medical attention.

Calcium Score

0 - 0:	No identifiable atherosclerotic plaque. Very low cardiovascular disease (CVD) risk.
1 - 10:	Minimal plaque burden. Low CVD risk.
11 - 100:	Mild plaque burden. Moderate CVD risk.
101 - 400:	Moderate plaque burden. High CVD risk.
Greater than 401:	Extensive plaque burden. Very high CVD risk.

Score Summary

Your total calcium score is 0.
